

UniSUC is **non invasive, dry, easy to use and comfortable**. We collect between 200 & 1100 ml per night, & leakage is less than 1/2 oz. We are **very happy** with this product. There have not been any infections, and we have used it for over a year. **The customer service is excellent**. We have recommended UniSUC to all of our healthcare providers. **Thank you UniSUC!**

Better than Purewick!!

I am almost unable to express the level of my **satisfaction and gratitude** for the **UniSUC** external catheter system that I have been using for the past nine months. As a woman who is bedridden from a stroke, I have tried **many different products** and devices to manage my condition, but none of them were as **comfortable, convenient, and effective** as **UniSUC**. Before I discovered **UniSUC**, I was using the Purewick system, however, I found the Purewick system to be very expensive, disappointing and frustrating. It simply didn't do what it was supposed to do. In contrast, **UniSUC** has been a **major improvement** in my **quality of life**. It keeps me **dry all day long**, is **simple to use** and at 1/3 the cost this is an **absolute no-brainer**. After I started using UniSUC, I have noticed a **significant improvement** in my quality of life.

Thank you for creating such a **wonderful device** that has **changed my life for the better**. I hope that more women will discover the benefits of UniSUC and experience the same **relief and satisfaction** that I have.

Customer Experience Study

The UniSUC external catheter uses low-pressure suction as a noninvasive solution for managing urinary incontinence (UI). This survey evaluated patient and caregiver satisfaction with UniSUC and compared it to other external catheters. Conducted between May and September 2024, the online survey used a 5-point Likert scale to measure satisfaction. Among 50 respondents, the UniSUC system scored statistically higher ($p < 0.05$) in all categories except nighttime frequency compared to PureWick for urinary incontinence. It was scored better for Comfort, Satisfaction, Dryness and Expense amongst others.
